NCR APTRA™ Activate

> Would you like your customers to enjoy the best self-service experience possible?

YES

The most advanced self-service software application

Today's consumers have high expectations when it comes to interacting with technology. Self-service applications are no exception: not only do consumers demand intuitive and striking interfaces, but they also expect to be able to access the transactions they need, when and where they want. NCR APTRA Activate provides the solution to these requirements. By using the latest software technology, it enables commonality of the consumer experience across all hardware in your self-service channel—and true integration with your current infrastructure, allowing you to share existing resources and optimize costs.

- **Attract and retain consumers**

  In addition to the graphical, rich and configurable user interface, APTRA Activate provides unparalleled convenience. By utilizing the latest multi-channel technology, APTRA Activate provides the widest possible transaction set by making use of multiple internal as well as external systems and services.

- **Improved speed to market**

  APTRA Activate's architecture allows re-usable components to be easily assembled and configured to build new products or add functionality to an existing solution. An intuitive integrated development environment (IDE) allows you to rapidly update the "look and feel" and flow of your application, as well as add new transaction sets.

- **Built-on security and compliance**

  NCR places the highest priority on security. A wide range of threats and challenges exist, which requires a wide range of security solutions. APTRA Activate comes complete with full support for all of the latest standards, including "out of the box" PCI PA-DSS validation and EMV Level 2 certification.

NCR — Experience a new world of interaction

- **IT efficiency and flexibility**

  APTRA Activate has been designed from the bottom up to make efficient use of network bandwidth and to improve the manageability of your self-service environment. It provides the instrumentation you need for insight into how your self-service channel is being used, and how well it is performing.
